Conference Notifier Bot

A bot that reminds you of conferences

Category: All employees

Recordings Bot

Distribution of recordings and transcriptions

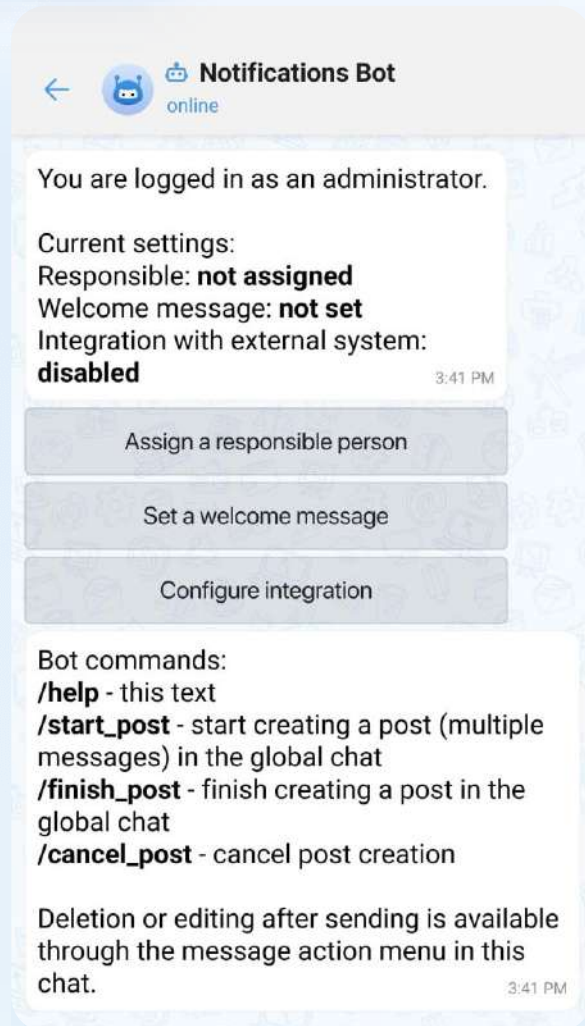

Category: All employees

Notifications Bot

Global Chat Newsletters

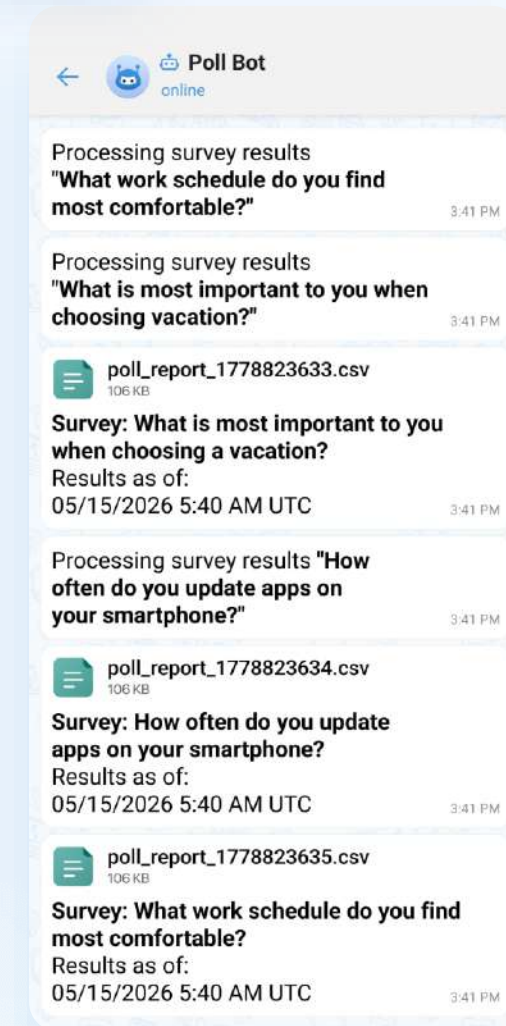

Category: All employees

Poll Bot

Bot for generating survey reports

Category: All employees

Ready to deploy

Contacts Bot

Getting information on the contacts of colleagues

1

Search by parameters

The bot will help you find information about colleagues by various parameters - full name, position, department, internal number of the employee, etc.

2

A book of contacts of colleagues at hand

The bot will provide the contact details of employees working in the company when you click on "All contacts".

3

Bot administration

Uploading and unloading the contact list, adding and editing contacts manually, mass deletion of employees, as well as automatic deletion of user data when he leaves the corporate server.

Category: **All employees**

Business task: Quick search for contacts of colleagues

Mail Bot

Email at your fingertips

1

Forward messages and send emails

The bot allows you to forward messages and attachments from personal and group chats to a private chat with the bot and then send them to email.

2

Choosing a recipient

The user can select the recipient from the list of users before sending the message.

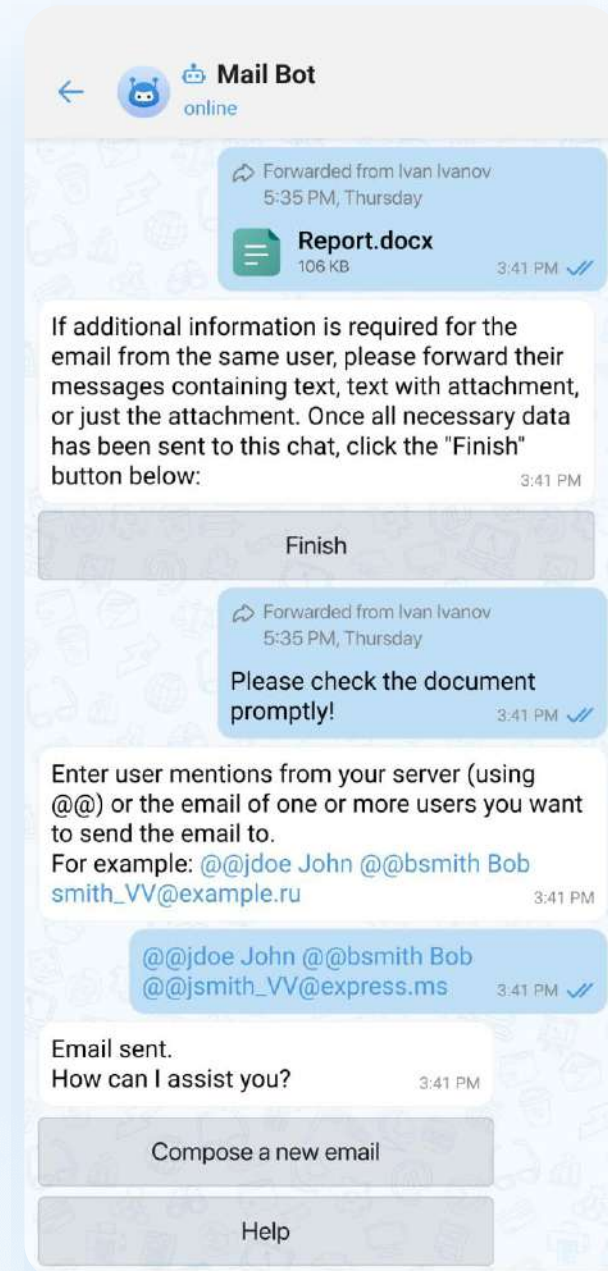

3

Sending e-mail

The bot sends an email with the message text and attachments to the email of the selected recipient.

Category: **All employees**

Business task: Working with mail in the messenger

X

ChatGPT Bot

Quick answers to questions from the neural network

1

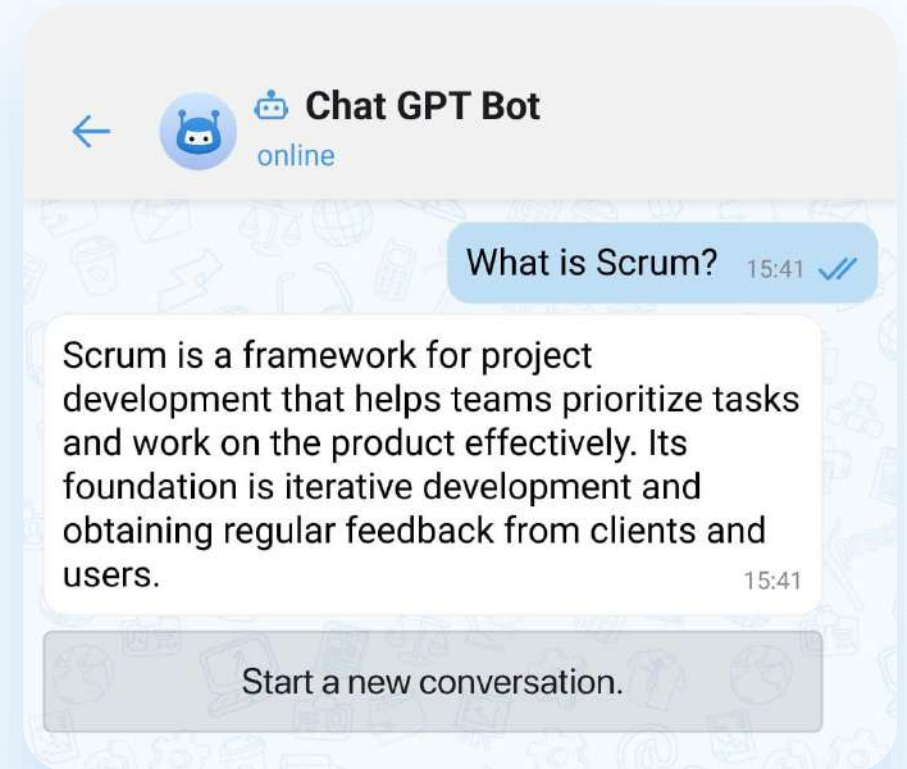

Getting answers to questions

The bot integrates with the GPT neural network and provides answers to text questions.

2

Saving the context of the correspondence

The neural network remains in the context of correspondence to make the conversation productive. You can also start a new conversation with the neural network.

Category: [Top management](#) [Heads of subdivisions](#) [All employees](#)

Business task: Working with a neural network in a messenger

Getinfo Bot

Obtaining information about users

1

Obtaining system information about users from corporate servers

with the ability to upload in Excel format, including name, AD-email, company name, department, position, AD-login, AD-domain and HUID (identifier).

Category: **Technical Department** **Developers**

Business task:Automation of obtaining system information about users

Getinfo Bot

Healthcheck Bot

Checking the health of CTS servers

1

Checking the health of CTS servers

The bot is designed to monitor the availability of CTS servers in real time. It sends ping requests to bots deployed on servers, monitors the receipt of pong responses, and provides statistics on the status of servers to quickly identify problems.

Category: **Technical Department** **Developers**

Business task: Obtaining system information

Onboarding Bot

Getting information on working in the company for beginners

1

A convenient and fast way to get information

You can add contacts, documents, templates, links, and transitions to other useful bots and SmartApps to the bot.

2

Quick partition setup

The administrator can edit existing sections or create new ones.

Category: **All employees**

Business task: provides information for onboarding new employees

X

Service Desk Bot

Sending requests to the technical support mail

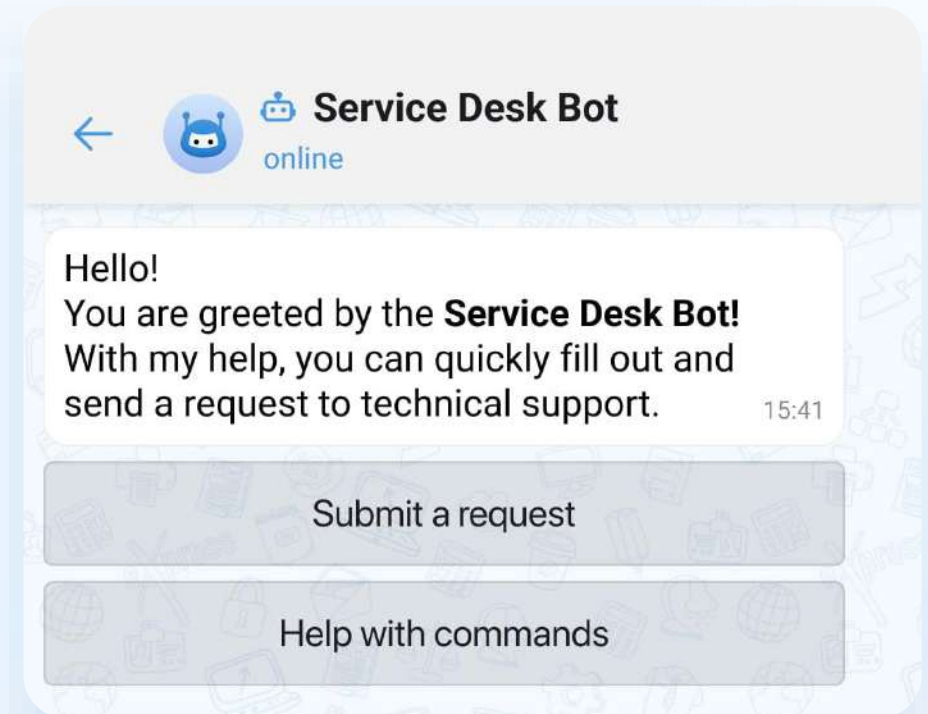

1

Formation of requests to technical support

with automatic sending of a request to the e-mail of the support service.

Category: **All employees** **Technical support**

Business task: Automation of technical support processes

Sticker Bot

Using your favorite stickers

1

Loading stickers

Add your favorite stickers to the messenger and let the communication sparkle with new colors.

2

Sticker pack changes

Add new stickers or remove existing stickers in the set as needed. At the same time, the changes will affect everyone who uses this sticker pack.

3

Ease of Use

You can either create new packs by uploading stickers to them one by one, or import ready-made sticker packs.

Category: All employees

X

Hospital Bot

Convenient service in case of illness

1

Informing about the opening/closing of sick leave

Inform the management about the opening, extension and closure of the sick leave.

2

Reminders

You won't be able to miss important notifications - the bot will send a reminder on the day of your next visit to the doctor.

3

Electronic sick leave

Provide the management with the number of the electronic sick leave, all further calculations are made online.

4

Bot administration

In the administrative panel, you can configure the appointment of different responsible persons in the company, temporarily disconnect them with automatic reconnection at the end of the disconnection period.

Category: **Heads of subdivisions** **All employees**

Business tasks: registration of sick leaves, informing the manager about the employee's illness

X

The screenshot shows a chat interface for the 'Sick Leave Bot'. At the top, there is a header with a back arrow, a bot icon, and the text 'Sick Leave Bot online'. The chat history includes:

- A message from the bot: 'If you are sick and have filled out a sick leave form, click the button below: 15:41'. Below it is a button labeled 'Open Sick Leave'.
- A user response: 'Open Sick Leave 15:41 ✓'.
- A message from the bot: 'Select the date to open the sick leave: 15:41'. Below it are three buttons: '02/17/2026', '02/18/2026', and '02/19/2026'.
- A user response: '02/19/2026 15:41 ✓'.
- A message from the bot: 'Enter the date of your next doctor's visit: 15:41'.
- A user response: '02/26/2026 15:41 ✓'.
- A final message from the bot: 'Thank you! The sick leave data has been recorded:'. Below this, it lists 'Opening Date: 02/19/2026' and 'Next Doctor's Visit: 02/26/2026'. It then states 'The sick leave notification has been sent to your manager and the accounting department.' and ends with 'Get well soon! 15:41'.

Congratulations Bot

Birthdays and holidays, significant dates will not be forgotten

1

Congratulations to colleagues and employees on holidays

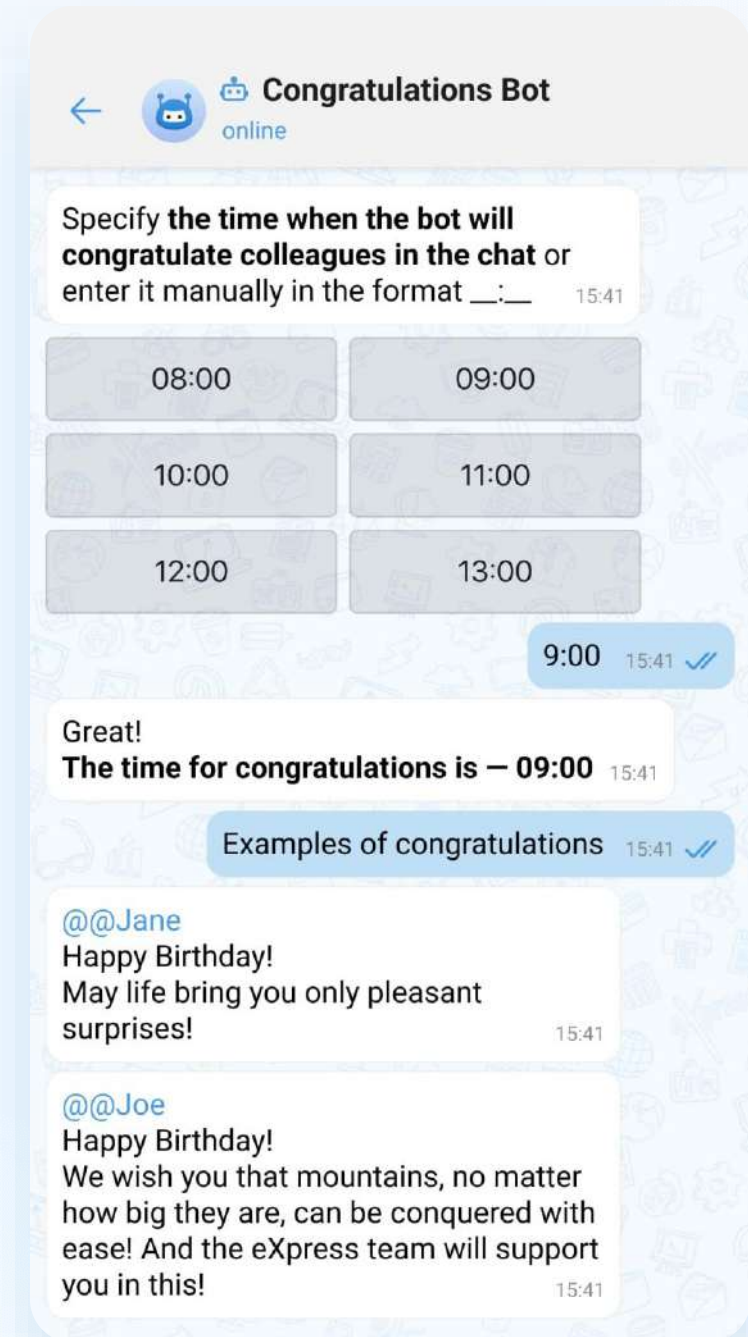

You no longer need to keep track of important dates - the bot will congratulate you on your birthday and other holidays in a timely manner.

2

Data Updates

The bot automatically notifies you when new employees need to be added to the database and notifies you when employees leave.

Category: All employees

Invite Bot

Automatically add to chats

1

Creating Rules

Create rules to automatically add new corporate users to chats by specifying companies, departments, and positions, as well as the chats to which users with the specified profile attributes should be added.

2

Adding new users to chats

The bot checks new users according to all the rules and automatically adds them to the necessary chats.

3

Selectively check existing users for rules

You can check any user for compliance with the specified rules; if the user is absent from any chats, Invite Bot will automatically add them according to these rules.

Return Bot

Returning members to chats and channels

1

Returning members to important chats and channels

When you add a bot to a chat and give it administrator rights, it can return members who have left it to the chat.

Category: Chat Administrators

Business task: Automation of the return of participants to chats

X

Webhook Bot

Mailing from external systems

1

Receiving mailings from external services

The bot can receive requests from information systems. The bot supports the following formats: JSON, XML, URL-encoded.

2

Working with subscriptions

You can subscribe to the mailing list from an external system using a special command. You can deactivate your subscription at any time or check its status.

3

Viewing the list of connected services

The user can view the list of services connected to the bot using the appropriate command.

Category: **Technical Department** **Developers**

Business task: Subscription to external services

Random coffee Bot

Organization of meetings of employees online and offline

1

Creating a questionnaire

The bot helps to create a questionnaire about the employee, including interests, city, place of work and preferred meeting format.

2

Forming couples for a meeting

The bot forms couples for a meeting and sends the contact details of the interlocutor to employees.

3

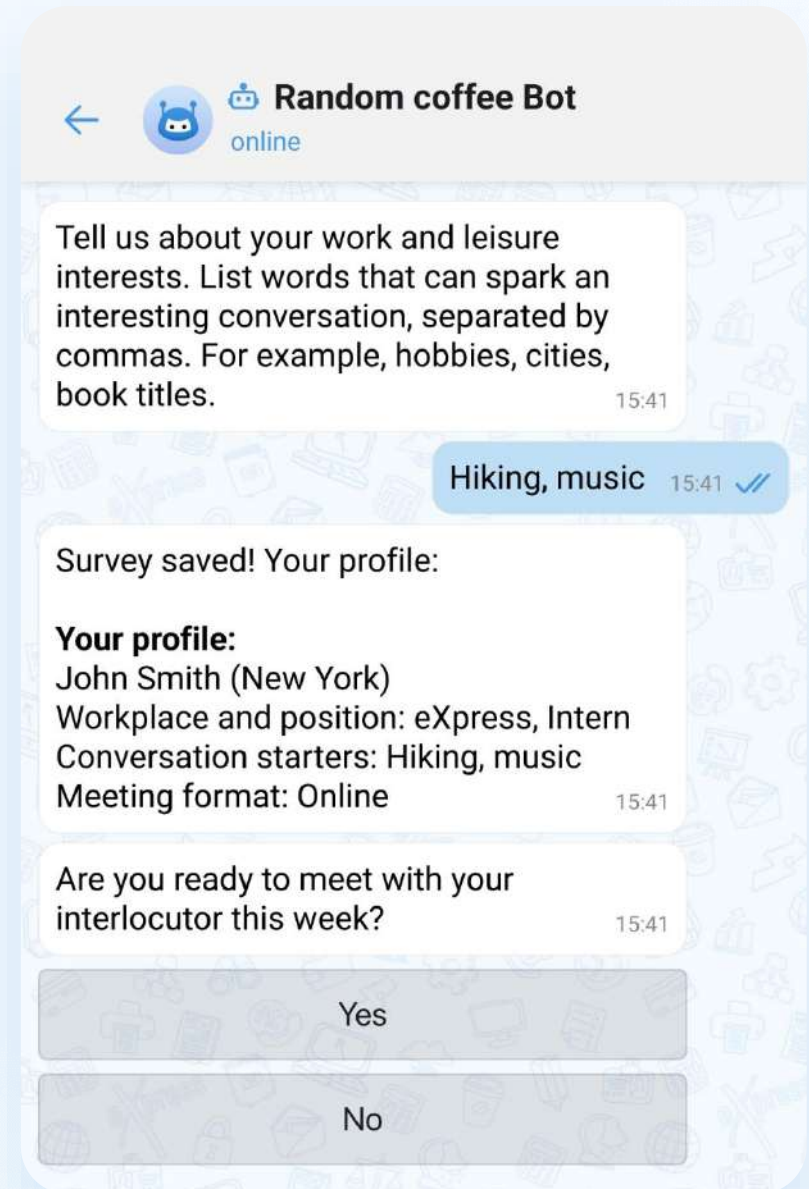

Statistics Upload

The bot collects user statistics and generates an Excel file for the administrator.

Category: All employees

Business task: Networking service for company employees

X

Workload Monitoring Bot

Monitoring the workload of employees

1

Creating teams

To track the workload of your subordinates, create teams and run surveys.

2

Conducting surveys

Conduct surveys on specific days of the week and times. Employees will rate their workload on a scale of 1 to 10, and you will receive the result of the survey.

3

Statistics Upload

The bot collects statistics on team loads, and you can always get a report to analyze the data.

Category: **Heads of subdivisions** **All employees**

Business task: Employee workload tracking

Forwarder Bot

Forwarding messages from one chat to another

1

Creating Your Own Forwarding Rules

Create your own rules by which the bot will forward messages from one chat to another.

2

Create workgroups to share rules

Create teams and share access to your rules with members.

3

Manage rules and teams

You can manage your rules and teams, and manage the rules you've shared with them.

4

Exporting a report

Export a report on cases of configured rules for the specified period and the entire period.

Category: **Heads of subdivisions** **All employees**

Business task: Saving employees time on manual message forwarding

X

Jira Monitoring Bot

Automatically create tickets in Jira

1

Create cases in Jira

Create issues in Jira based on messages from specified chats.

2

Sync comments

Publishing comments in Jira based on discussions in specified chats, as well as publishing messages in eXpress based on public comments on issues in Jira.

3

Moving a Jira issue from one project to another

4

Configuring the bot by the admin

Managing the list of chats for monitoring includes adding and deleting chats, editing information about them (technical support forms, status and monitoring parameters), as well as importing and exporting the list of chats in XLSX format.

TgMigrate Bot MVP

Migration of group chats and channels from Telegram to eXpress

1

Transfer chats, channels, and chat history while maintaining the structure

The bot connects a Telegram account via Telethon and transfers messages, attachments, quotes, replies, and participants to eXpress.

2

Flexible configuration of migration parameters for each chat

For migration, you can configure the range of upload dates, message format, the need for attachments, service messages, and a forum migration strategy.

3

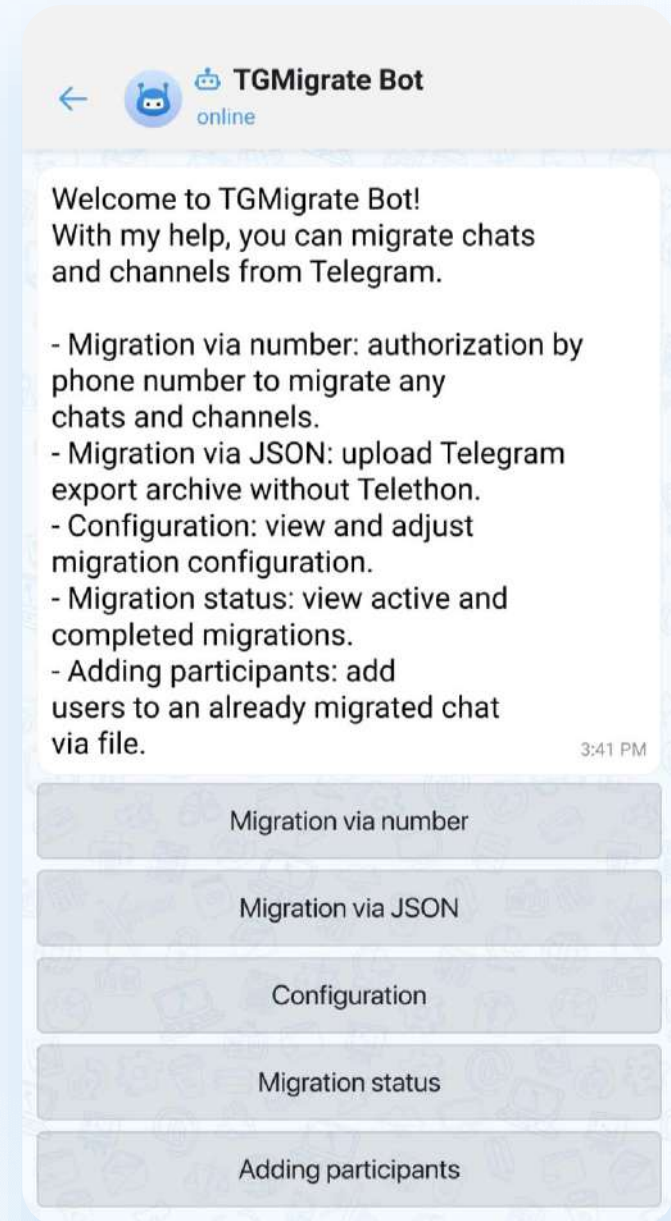

Migration management with error control and reprocessing

The bot supports mass transfer of all chats, restart with continuation, reprocessing only failed items, adding new members via Excel, manual user matching, and backup import from Telegram upload.

Category: **Technical Department** **Developers**

Business task: migration of group chats and channels from Telegram to eXpress with saving history

X

TelegramProxy Service MVP

Adaptation of existing telegram bots to the eXpress platform

1

Adaptation of Telegram Bot API to eXpress BotX API

The service takes standard Telegram Bot API methods and converts them into eXpress BotX API calls.

2

Bi-directional event sharing

The service transmits requests from Telegram to eXpress and converts incoming eXpress events into a Telegram-compatible format for webhook integration.

3

Guarantee of the order in which messages are processed

For each dialog, the correct sequence of event delivery and processing is preserved.

4

Support for multiple Telegram bots

The service supports the connection and routing of several Telegram bots within one integration.

Category: [Technical Department](#) [Developers](#)

Business task: adaptation of existing Telegram bots to the eXpress platform without a complete rewrite of the integration

Bot ideas

TimeTracking Bot

Fast Labor Write-Off

1

Write off work

The bot offers to fill in the write-off parameters using convenient buttons and commands. Confirm the write-off, and the information will be sent to the system.

2

Presets Menu

To speed up the process of writing off work, create write-off presets.

3

View reports

The bot can provide a detailed report on the write-off of labor costs for a specific period.

TimeTracking bot
online

Labor costs have been recorded!

Activity type: Work

Work type: Documentation

Category: Heads of subdivisions All employees

Business task: Track time spent on work tasks

HR Bot

Accessible HR documentation

1

Important data at your fingertips

With the help of the bot, you can get the necessary documents in electronic format at any time.

2

Obtaining any certificates

You no longer have to wait long for the document to be issued - get any necessary certificate in a couple of clicks: 2-NDFL, 182-n and others.

3

Minimization of actions

You don't have to fill in additional contact details, as the bot takes the user's data from their eXpress profile.

Category: **Heads of subdivisions** **HR Department** **All employees**

Business tasks: automation of obtaining personnel documentation (2-NDFL certificates, statements, job descriptions, regulations)

Vacation Bot

Quick registration of vacation

1

Registration of an application for leave

View information about the planned dates of annual paid leave and apply for unpaid leave if necessary.

2

Approval of leave by the manager

Send a request for vacation, and the bot will contact the manager itself. As soon as the decision on the vacation is received, you will receive a separate notification in the chat.

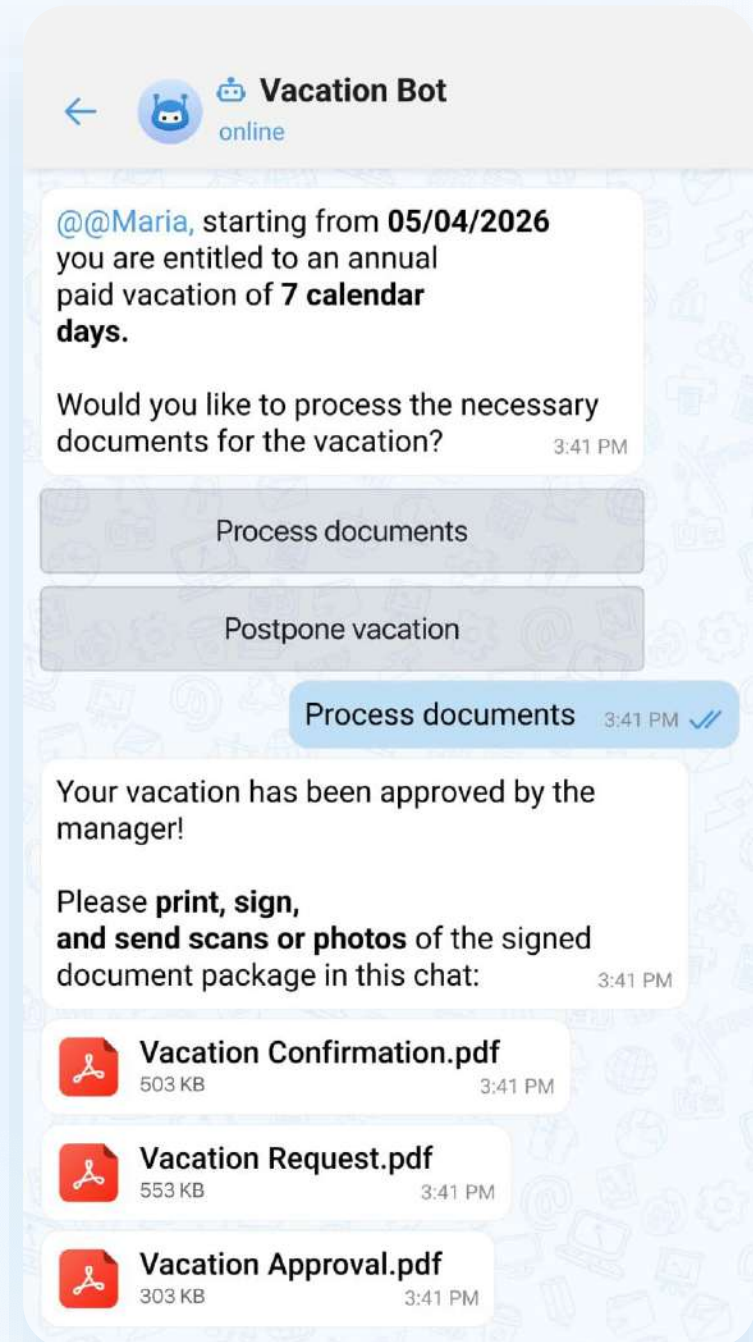

3

Working with documents

Get all the necessary documents for your vacation in one chat. For your convenience, some data will already be pre-filled in them.

Category: **Heads of subdivisions** **HR Department** **All employees**

Business task: Automation of vacation registration

Courier Bot

A quick way to apply for courier services

1

Formation of requests

The bot will help you create a request for courier shipment, taking into account all mandatory and optional fields.

2

Approval of applications

Assign a manager to approve requests, who will be able to confirm or send for correction the request directly from the chat with the bot.

3

Shipment Status Tracking

The bot will help you track the status of delivery by date, number, address, or other parameter through integration with your personal account in the courier service.

4

Delivery Confirmation

Request and receive confirmation of parcel deliveries from the staff responsible for controlling the delivery.

Category: All employees

Business task: Automation of administrative department processes

X

Pass Bot

Quick Pass Order

1

Creating a Pass Application

You can sequentially enter the necessary data for ordering a pass (data about visitors, pass period, department), as well as change the information already entered.

2

Automatic request generation

The bot independently generates a document with a pass application according to the established template.

3

Sending the application to the responsible persons

The bot sends the generated document to the security service and the person responsible for the department by e-mail.

Category: **All employees**

Business task: Automation of Administrative/Security Processes

The screenshot displays a chat window for 'Pass Bot' (online). The interface includes a back arrow, a bot icon, and the bot's name. The chat history shows the following sequence of messages and actions:

- Bot: "Please enter the full name of the guest: 15:41"
- User: "John Smith 15:41 ✓"
- Bot: "Please specify the required date: 15:41"
- User: "02/22/2026 15:41 ✓"
- Bot: "Select a department: 15:41"
- User (via buttons): "IT Department", "Finance Department", "Marketing Department", "Preset Menu", "Help"
- User: "IT Department 15:41 ✓"
- Bot: "Check the details:
Guest Name: John Smith
Visit Date: 02/22/2026
Department: IT Department 15:41"
- User (via buttons): "Order pass", "Cancel"
- Bot: "Request successfully sent! 15:41"

X

VMI Bot

All clinics at your fingertips

1

Available information

The bot will help you find information about the benefits and conditions of your VMI program. With the help of the bot, you can send any type of documents - pdf, doc/docx, xls/xlsx, jpeg, etc.

2

Convenient search

The bot will help the employee quickly find the nearest clinic by type of care provided, address, metro or district.

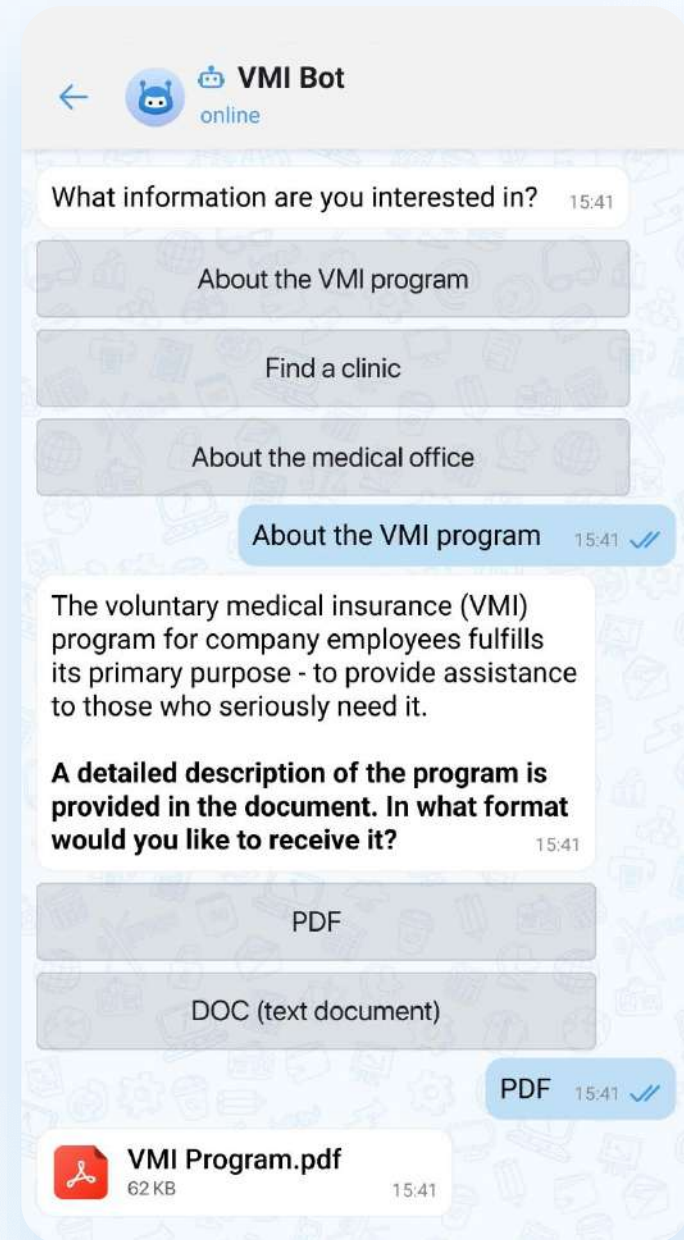

3

Information management

Through the bot's administrative panel, you can change the files that users receive, as well as add, modify, or delete clinics.

Category: **HR Department** **All employees**

Business task: provision of information on the VHI program for employees

Lunch Bot

Eating information

1

Employee onboarding

The bot will help you find a place for a snack, lunch, coffee shopping, and other places to eat that are available to your employees. It will show you which of the places are open right now.

2

Collecting feedback

Right in the chat with the bot, users will be able to leave their feedback on food outlets in the building in a couple of clicks, and this data will always be available to you in the admin panel.

3

Information management

Through the bot's admin panel, you can change the product catalog, menu, or opening hours of the place.

Category: **Heads of subdivisions** **All employees**

Business task: Adding and retrieving information about food locations

Support Bot

Contacting Support

1

Search by FAQ

The user can enter keywords to search for the problem/question.

2

Creating a new requisition

The bot sequentially requests details on the problem from the user and sends a request to technical support.

3

Receiving a response from support

When support specialists respond to a user's request in the system, the user receives a notification containing information on the request and the response of the support department.

Category: **Technical support** **All employees**

Business task: Automation of the creation of requests for technical support

WebsiteNotifications Bot

Filtering emails and sending them to the desired chats

1

Checking emails for the necessary content

The bot parses emails and checks which direction and company the request belongs to.

2

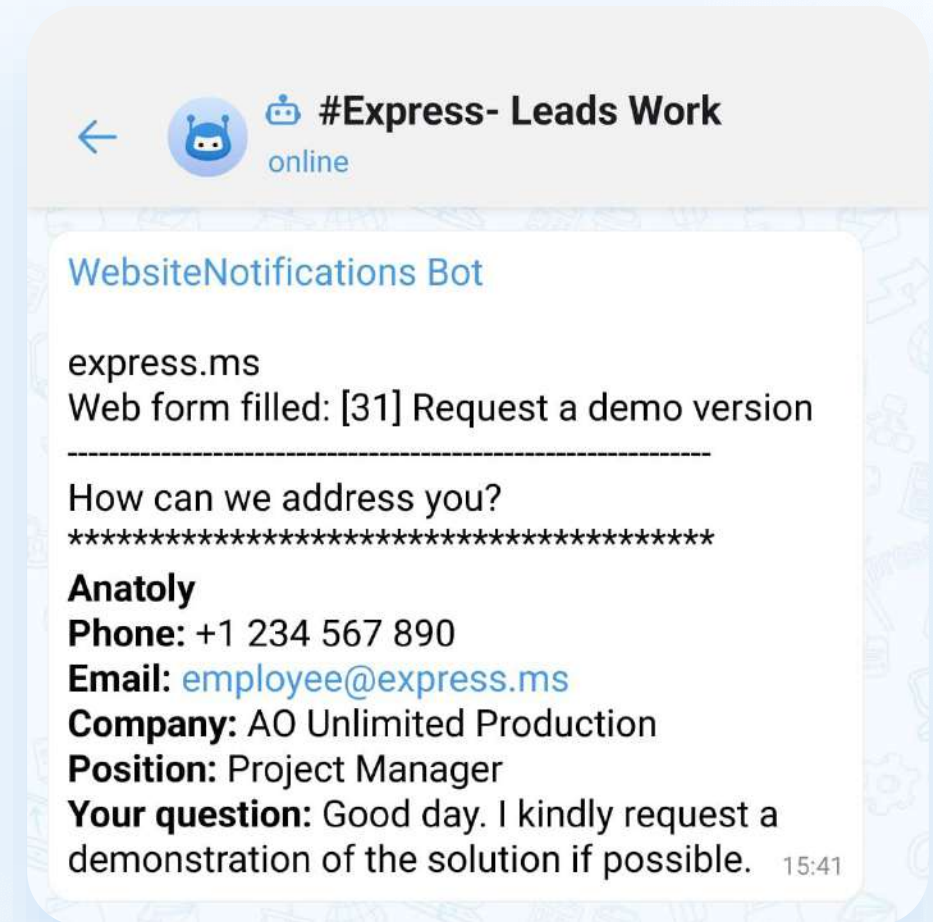

Sending Email Content to Chats

The content of emails filtered by the bot is automatically sent to the specified chats.

3

Monitoring Sent Messages

In a group chat, the bot sends the text of the message sent to the chat, the time of sending, and the chat itself.

Category: **Chat Administrators** **Marketing**

Business task: Automation of sending requests from eXpress chats

On-Duty Bot

Convenient chat duty setting

1

Creating On-duty Lines

Create queues for chat duty, set up a schedule for sending notifications in crontab format.

2

On-duty management

With the help of the bot, you can manage the schedule and notifications, change the order of those on duty.

Category: [Chat Administrators](#) [Technical support](#)

Business tasks: Formation of a queue for duty for chat, setting up automatic notifications

Bot Control

Track activity in group chats

1

Set up control

The bot allows the manager to configure control over chats in which the bot is a member and administrator.

2

Sending notifications

The bot sends notifications to the manager if there has been no activity in the chats for more than 3 business days.

Category: [Heads of subdivisions](#) [All employees](#)

Business task: Automation of control processes for the manager

Motivator Bot

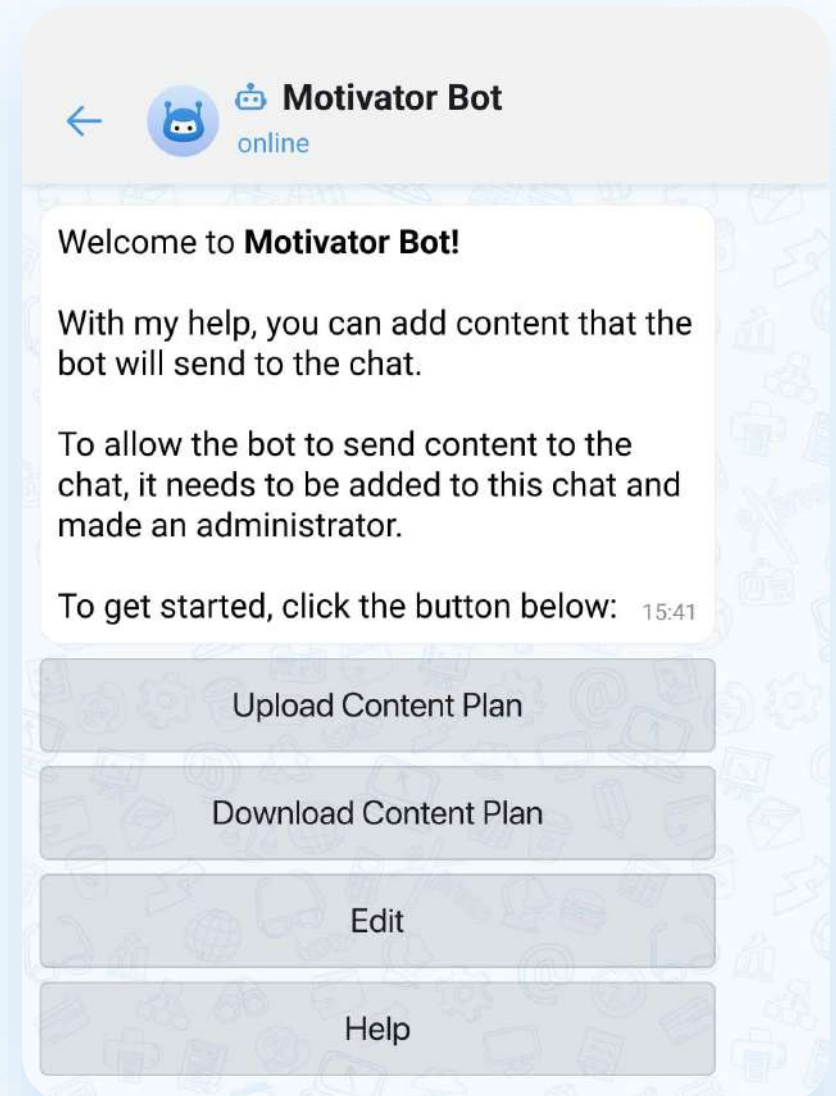

Sending motivational messages to group chats

- 1 **Uploading a content plan**
The bot allows you to upload a content plan in a specified bot format.

- 2 **Newsletter**
The bot sends motivational messages to the specified chats according to the uploaded content plan.

Category: **Heads of subdivisions** **All employees**

Business task: Automate sending inspiring and useful posts for employees

Question Collector Bot

Collection of employee questions

1

Collecting questions

The bot collects questions in chats using a hashtag set by the user.

2

Unloading questions

With the help of the bot, the administrator can upload the collected questions.

Category: **Heads of subdivisions** **All employees**

Business task: Automation of the collection of questions of interest to employees

Moderator Bot

Group Chat Moderation

1

Setting up moderation

The bot allows the administrator to set prohibited words that will be moderated in group chats.

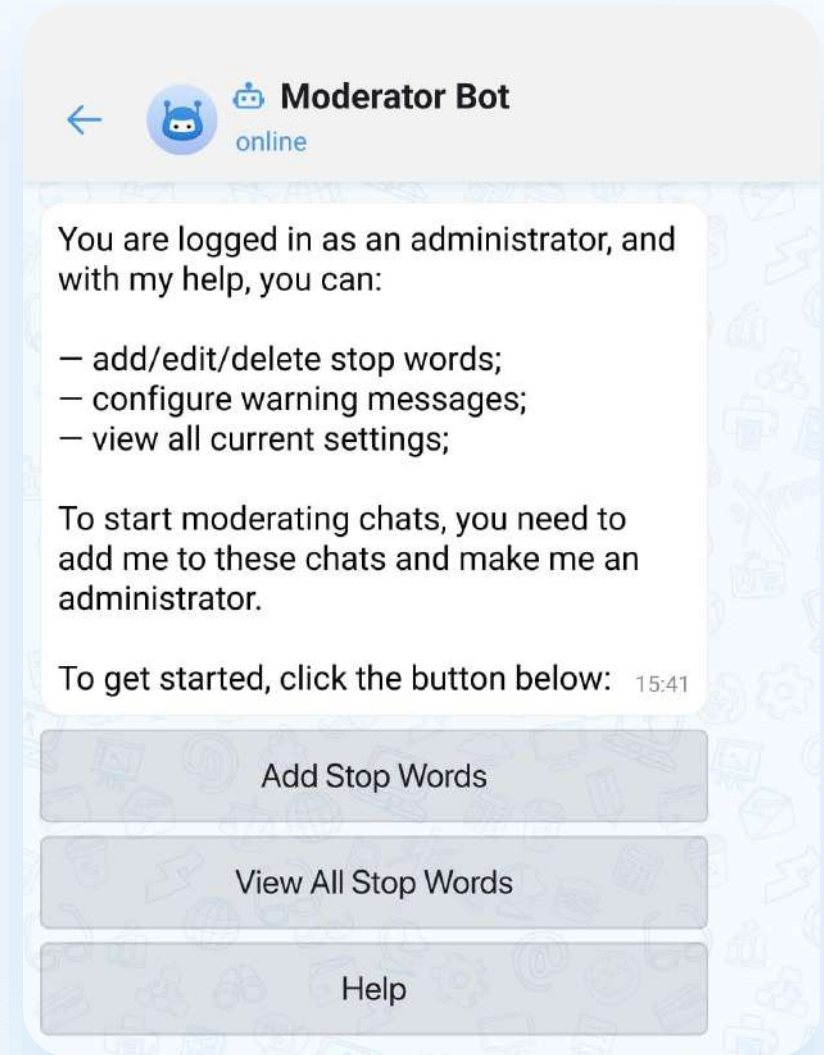

2

Moderation

The bot moderates chats by sending warning messages or deleting user messages.

Category: Chat Administrators

Business task: Automate group chat moderation

Request Bot

Task management

1

Creating Assignments

With the help of the bot, managers can issue instructions.

2

Execution of instructions

The bot allows the executor to view instructions and report on the status of execution.

3

Bot administration

The administrator can use the bot to create new types of orders through the administrative panel.

Management Bot

Search for projects in a couple of clicks

1

Search for projects

Enter any words (in whole or in part) that are relevant to the project. The bot will offer several of the most suitable options on request for selection.

2

Get detailed information on the project

When you select one of the options, the bot allows you to view all the information on the project.

3

Scalability

The bot integrates with the project database, so when entering or changing data, the user always sees up-to-date information.

Category: **Management** **Project Managers**

Business task: Obtaining information about projects

Redmine Bot

Assistant Project Manager

1

Gantt chart

Get an up-to-date Gantt chart for the tasks of any project in the Redmine system.

2

Project Calendar

With the help of the bot, you can get a project calendar with the start and end dates of individual tasks.

3

Team Work Control

You can get a list of open tasks of any user, as well as view detailed information on each of them.

4

Creating Tasks

The bot allows you to create new tasks with all the necessary parameters (project, description, type, due date).

Category: **Management** **Project Managers**

Business task: Automation of work with projects

The screenshot shows a Telegram chat with the Redmine Bot. The bot's profile at the top shows a blue robot icon, the name "Redmine Bot", and the status "online".

The chat history includes:

- A command `/get-gantt` sent at 15:41, which was successfully received (indicated by a checkmark).
- A prompt "Select a project:" followed by two buttons: "Android" and "iOS".
- A screenshot of a Gantt chart for a project. The chart displays a timeline from 2014-10 to 2014-12. On the left, a list of tasks is shown with their IDs and names. On the right, the corresponding task bars are displayed with their progress percentages. For example, "Task 1123-41101" is 100% complete, while "Task 1123-41102" is 5% complete.
- A command `/tasks employee@express.ms` sent at 15:41, which was successfully received.
- A prompt "Open tasks for user employee@express.ms" followed by the text "employee@express.ms".

Monitoring Bot

Network Infrastructure Monitoring

1

Monitoring System Alerts

You can activate notifications from the monitoring system. Thus, the bot will send you up-to-date notifications about events. You can turn off notifications at any time.

2

Monitor device status

You can quickly get information about unreachable nodes and take the necessary corrective action.

3

Reports

You can view the reports of the monitoring system, for example, "TOP-10 devices by CPU load".

4

Obtaining information about companies

The bot allows you to find information about enterprises in a distributed structure, as well as about the devices related to them. With the help of the bot, you can get the contact information of responsible persons and network providers.

Category: **Technical Department**

Business task: Automation of the work of the technical department

Planning Poker Bot

Task Complexity Estimation

1

Voting in personal chats

Start voting on tasks in personal chats - the bot will write to the user itself, even if he has not had a dialogue with the bot before.

2

Convenient management

Setting up the list of participants, starting the task assessment and the re-voting process, automatic and manual completion of the assessment - everything that allows you to conduct the assessment more efficiently.

3

Transparency of the process

The organizer and participants can see the process of evaluating the task online - who voted, and whose assessment is still expected, which allows you to control and manage the process.

4

Counting and sending results

The bot automatically generates an Excel spreadsheet with the results for all tasks that were evaluated during the session.

Jira Bot

Tasks are always at hand

- 1

Receiving notifications

The bot will send a notification to the chat about new tasks or changes to existing ones, so you don't miss anything important. Notifications can be configured in more than 5 parameters.
- 2

Creating Tasks

In a couple of clicks, you can create an issue with filling in all the main fields of the issue card in Jira.
- 3

Project Management

Get a task list with brief information on the board of the current sprint and move one or more tasks to the target sprint directly from the chat.
- 4

Time logging

The bot will show a list of enabled timers for tasks, and will also help you start, stop, or cancel time logging.

Business tasks: mobile issue management in Jira

Cisco Bot

Mobile forwarding setup

1

Current call forwarding status

The bot will help you check the current status of forwarding to an internal or external phone number, even away from the office.

2

Automatic settings

You do not need to enter your corporate number - the bot will automatically determine it through integration with Cisco Unified Communications Manager.

3

Set up call forwarding

Set up call forwarding to internal corporate numbers or external mobile and landline numbers.

4

Cancel call forwarding

The bot also allows you to disable redirects at any time.

Category: All employees

Business tasks: Set up desk phone forwarding

You do not have an active forwarding. 15:41

Set up forwarding.

You can set up forwarding to an internal or external phone number.

For **internal** forwarding, enter a 4 or 7-digit number.

For **external** forwarding, enter the number in the format: [phone code]

For example: 1234567890 15:41

Confirm the correctness of the entered number:

+1 234 567-89-00 15:41

Confirm

Cancel

Forwarding is set:

Your corporate number 0123 is forwarded to the number +1 234 567-89-00. 15:41

Forwarding status

EDMS Bot

Mobile access to EDMS

1

Get relevant tasks

All tasks on documents that are assigned to a user in the EDMS also appear in the bot. You can view detailed information about the document, approve or reject the task.

2

Search for user tasks

The bot provides the function of searching for tasks assigned to a user by any parameters, and the search results will correspond to his access rights in the system itself.

3

Execution control

When assigning important documents to other employees, you can set a task for control. Within the established time frame, the bot will send notifications to the participants in the process.

Category: **Top management** **Heads of subdivisions** **All employees**

Business tasks: work with CSEC (IBM Lotus Notes, Open Text, SAP, Docsvision, ELMA)

Dion Bot

Link Generation in Dion

1

Quick Room Link Generation

It is possible to generate a link in a few clicks.

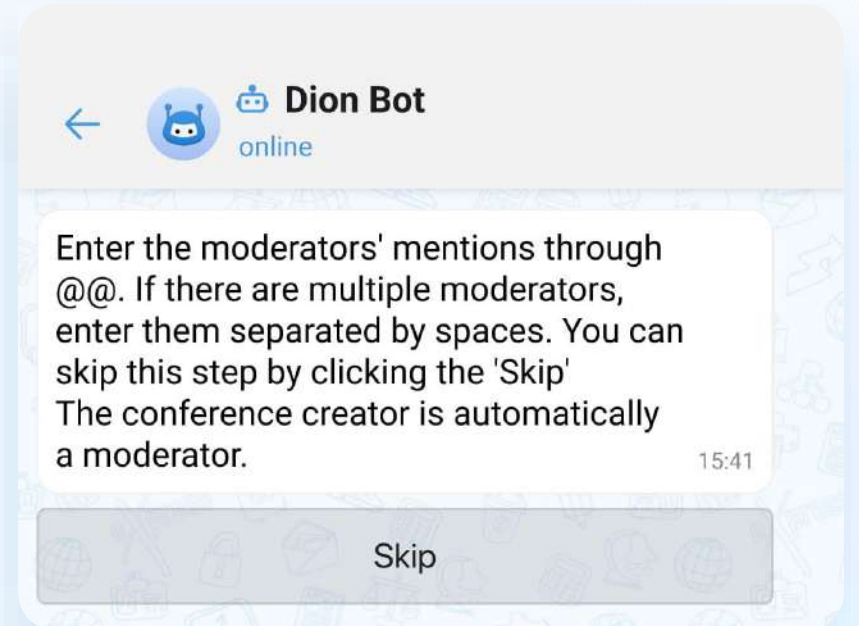

2

Convenient adjustment of link parameters

Through the bot, you can configure all the main parameters: link type, waiting room, guest entrance.

Category: **All employees**

Business task: Quick creation of a conference link in Dion

Translator Bot

Convenient transfer

1

Message Translation

The bot can monitor group chats or channels for messages in a foreign language and send translation directly to these chats.

2

Translation of texts

Send the text to the bot for translation in a personal chat. The bot will translate the text into the desired language.

3

Flexible Configuration

The bot allows you to flexibly configure the translation languages for each employee. An employee who has set up a bot for himself will receive a message with a translation in a group chat, visible only to him.

Category: **All employees**

Business task: Automating message translation

Speech-to-text Bot

Audio Transcription

1

Transcription of voice messages

The bot receives voice messages and converts them into text.

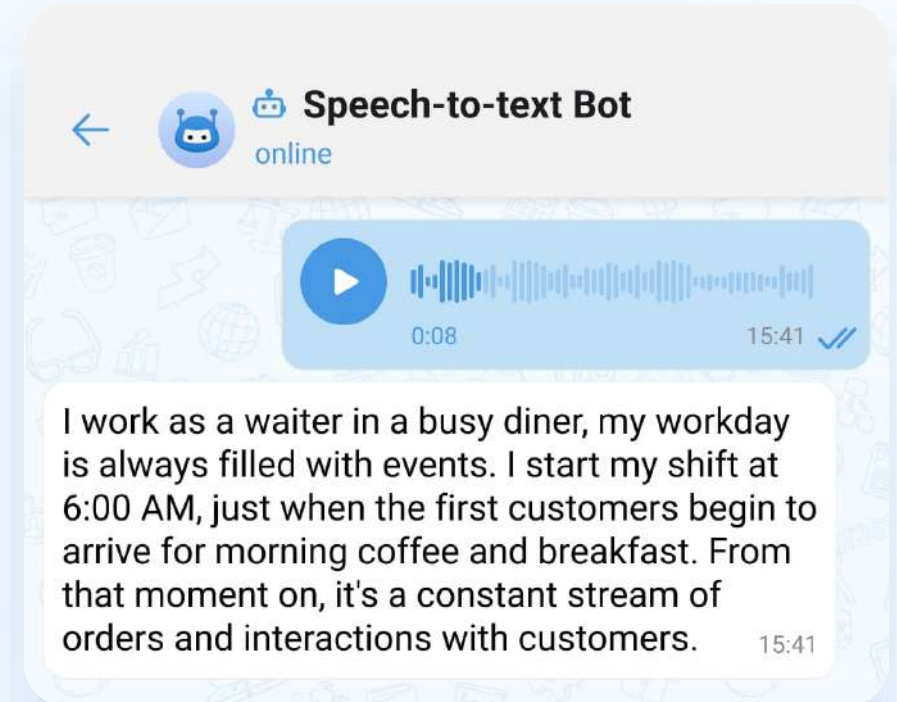

2

Decryption of mp3 files

The bot can also convert an mp3 file into text.

Category: **All employees**

Business task: Transcription of voice messages and mp3 files

Elma Bot

Sending notifications from Elma

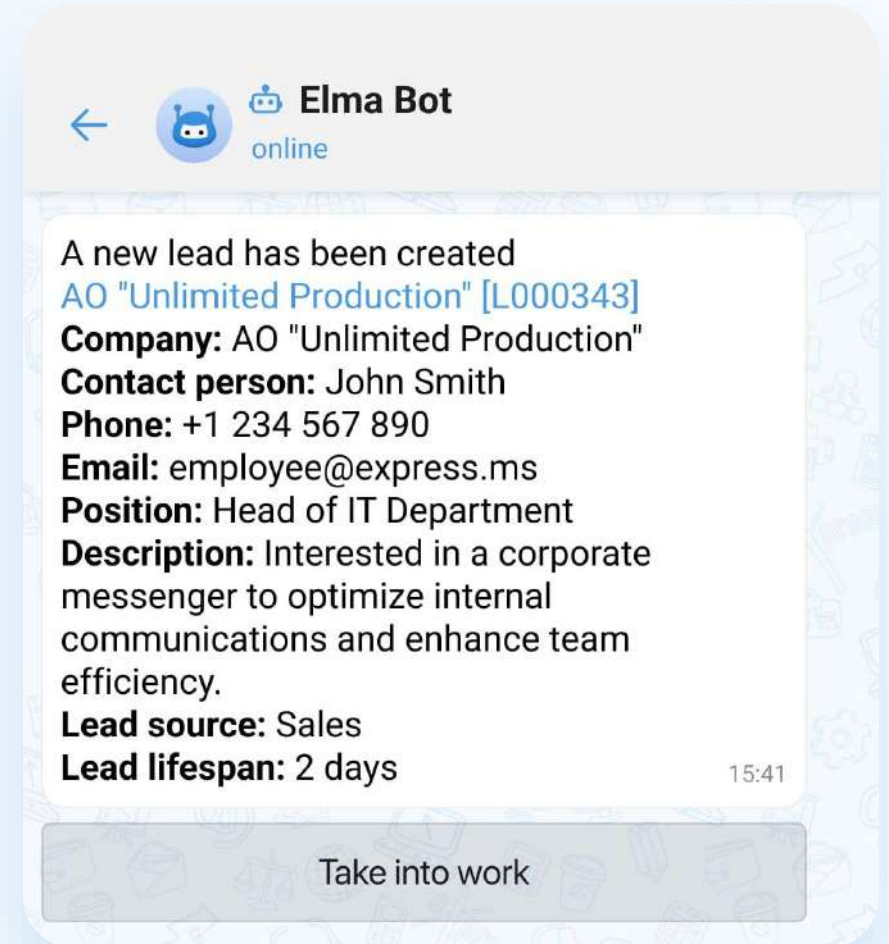

1

Send notifications to group and private chats

Send notifications from Elma to group and private chats with and without backaction buttons.

Category: **All employees**

Business task: Automation of CRM processes

ToDo Bot

Handy Task List

1

Tasks under control

Organize your to-do lists for the day – add them to the right groups, divide them by importance, and remove them from the list after completion.

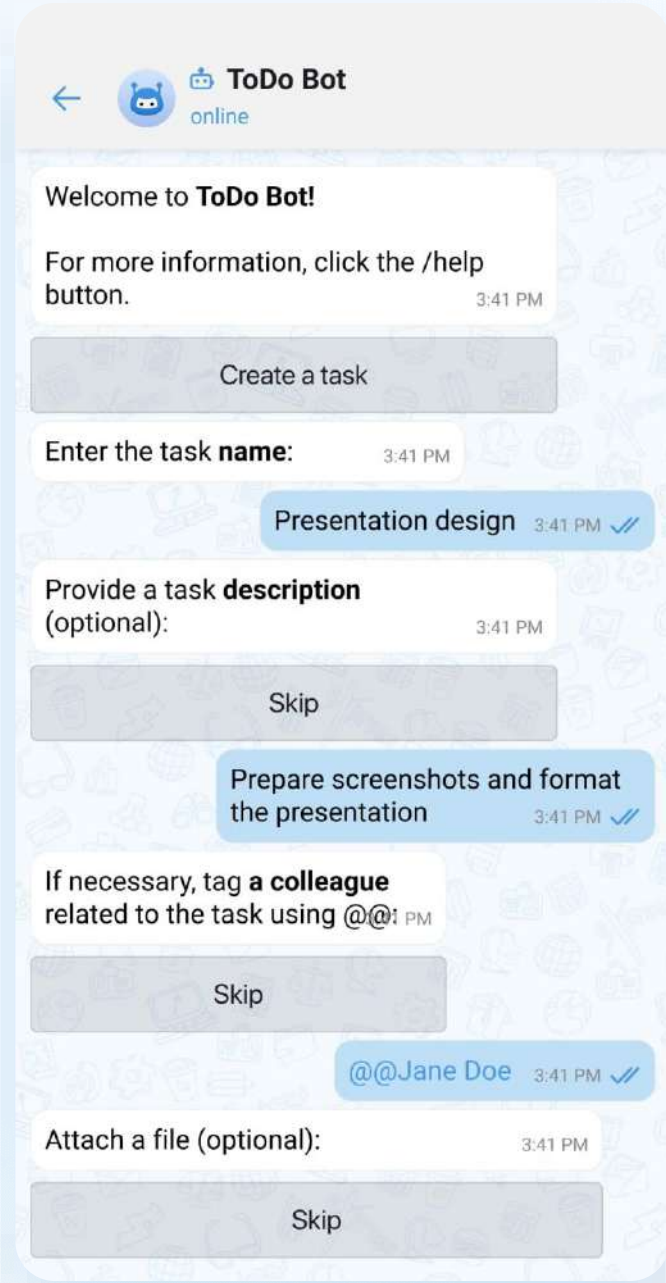

2

Nothing is forgotten

Add @@user tags or attachments to a task to fully capture the essence of the task.

Category: All employees Heads of subdivisions

Business tasks: planning and formation of tasks, management of working hours

Info Bot

Services that take care of employees

1

All useful information in one place

The bot will tell you any background information: who to contact for help, where to eat, how to get a pass, find the contacts of colleagues, and much more.

2

Available information

The employee will be able to receive information in a convenient format - with the help of the bot, you can send any type of documents: pdf, doc/docx, xls/xlsx, jpeg, etc.

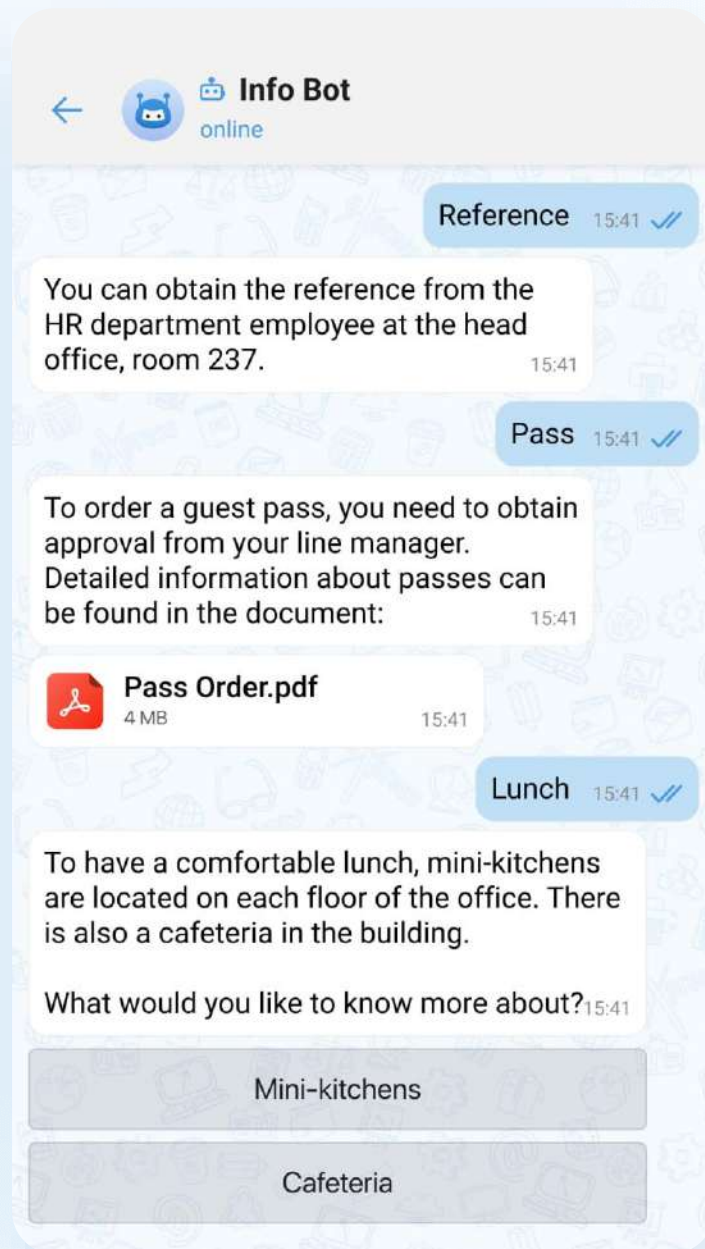

3

Data Management

Through the admin panel, you can always change the content of the bot that the user will see - create and edit the text of the sections yourself.

Category: **All employees**

Business task: Automation of the provision of reference information for employees

Personal Assistant Bot

Personal assistant

1

Viewing information from your personal account

In a couple of clicks, you can view various data of your personal account: the number of vacation days or a QR code of the pass.

2

View scheduled appointments

The bot allows you to view all scheduled meetings and basic information about them.

3

Getting Files

In addition to the basic information, the bot can also receive attachments attached to the meeting.

4

Find colleagues

The bot can find information about colleagues by various parameters: full name, position, phone number, etc.

Category: **All employees** **Heads of subdivisions**

Business task: Automate your day-to-day workflows

Reminder Bot

Reminders for important tasks

1

Setting the Time Zone

The bot allows you to set and change the time zone while working. It is enough just to specify the city in which you are located so that notifications are received at the current time.

2

Create reminders

After entering the reminder content, you can either select a time in the dynamic calendar or enter any other time. At the appointed time, the bot will send you a reminder.

3

Manage reminders

You can view the list of reminders you've created, delete some of them, or clear the list completely. The bot also allows you to change the time of reminders or postpone them for a specified period.
